

RICHARD WOLLYCE SANTOS DE SOUZA

TECH LEAD | FULL-STACK SOFTWARE ENGINEER

Franca, SP, Brazil | +55 (16) 9 9159-7978 | mail@richardwollyce.com
richardwollyce.com | linkedin.com/in/richardwollyce-/ | github.com/richard-wollyce

PROFESSIONAL SUMMARY

Tech Lead and Full-Stack Software Engineer building and operating product platforms across web, mobile, backend, payments, protected media, gamification, 3D experiences, generative AI, analytics, and infrastructure. Hands-on experience designing TypeScript monorepos, PostgreSQL data models, entitlement systems, resilient content releases, and event-driven commerce workflows. Combines architecture leadership with implementation, incident response, CI/CD, and production ownership.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL; working knowledge of Python, Rust, and Bash

Web & Mobile: React, TanStack Start/Router/Query, Next.js, Expo, React Native, Three.js, Vite, Tailwind CSS

Backend & Data: Node.js, PostgreSQL, Supabase, Drizzle ORM, Better Auth, REST APIs, Edge Functions, RLS, RBAC

Platforms & Delivery: Docker, Linux, Nginx, GitHub Actions, Vercel, EAS, CI/CD, BaseHub, PostHog, Mercado Pago

Quality: Vitest, Playwright, Maestro, TDD, automated linting, type checking, build gates, production monitoring

PROFESSIONAL EXPERIENCE

Tech Lead & Software Engineer | Casa Seth

Brazil
April 2026 - Present

- Lead the architecture and hands-on delivery of BiblinhaPlay, spanning a production web/PWA, shared backend services, an Expo/React Native client in development, protected media, recurring billing, gamification, and interactive games.
- Structured a TypeScript monorepo with pnpm, Turborepo, React, TanStack Start, shared UI and transactional-email packages, PostgreSQL/Supabase, Drizzle ORM, and automated quality gates.
- Designed server-side authentication and authorization, plan-based entitlements, hosted subscription checkout, verified and idempotent webhooks, payment reconciliation, and protected media streaming.
- Engineered immutable content releases with validation, hash-aware manifests, public/private media separation, atomic activation, and rollback-friendly snapshots independent of CMS runtime availability.
- Built BiblinhaCraft, a Three.js voxel experience with deterministic procedural terrain, lazy regional streaming, versioned save migration, creative and survival modes, missions, and touch-first controls.
- Lead development across Casa Seth's wider multi-product platform, including shared product packages, generative-image workflows, Pix payments, attribution, financial reconciliation, operational dashboards, and physical-product operations.

Software Engineer | MG Laser

Franca, Brazil
November 2025 - April 2026

- Built and maintained an ERP covering inventory, sales, and daily operations across multiple teams.
- Replaced spreadsheet workflows with structured forms and automated validation, reducing manual data-entry errors.
- Improved high-volume table performance through pagination and targeted PostgreSQL RPC calls while enforcing Row-Level Security and Role-Based Access Control.
- Managed deployment, monitoring, and infrastructure on a self-managed Linux VPS; restored service after a critical production outage in under 10 minutes with no data loss.

PROFESSIONAL EXPERIENCE - CONTINUED

Independent Software Engineer | Independent / Contract

Franca, Brazil
Ongoing

- Deliver full-stack web applications using TypeScript, React, Next.js, Node.js, Supabase, PostgreSQL, Vite, Tailwind CSS, and Vercel.
- Built a live-event registration system with Brazilian identity and WhatsApp validation, responsive staff workflows, and participant tracking.
- Built service-business chat and administrative workflows that turn conversations into structured budget requests and follow-up tasks.
- Own frontend, backend, database design, deployment, maintenance, and live support, using Vitest and TDD to prevent regressions.

SELECTED ENGINEERING WORK

BiblinhaPlay | Cross-Platform Learning Ecosystem | biblinhaplay.com

- Production web/PWA plus an Expo/React Native client in development, backed by shared APIs and server-controlled integrations.
- Subscription billing, entitlement-based access, authenticated media delivery, HTTP Range streaming, and immutable content snapshots.
- Persistent gamification and BiblinhaCraft, a custom Three.js voxel experience with procedural terrain and progressive world loading.
- Separate, not-yet-launched conversational AI R&D prototype with curated retrieval, adult consent, ASR/TTS, and child-safety-oriented guardrails.

Casa Seth Product Platform | Commerce & Operations

- Shared domain and UI packages across independently deployed product funnels and Supabase/Postgres Edge Functions.
- Paid-order validation, idempotent image generation, caching, concurrency control, telemetry, storage, and production-faithful benchmarking.
- Pix checkout, server-controlled pricing, UTM attribution, browser/server event deduplication, revenue reconciliation, and operator-led physical fulfillment workflows.

RoadToCyberSec.com | Cybersecurity Education

- Authored a structured learning hub covering threat analysis, MFA, safe browsing, incident response, networking fundamentals, and digital evidence handling.
- Published the material through a searchable Mintlify documentation experience for technical and non-technical learners.

EDUCATION

B.Sc. in Software Engineering | Universidade de Franca | 2025 - 2029

CERTIFICATIONS

- Santander Bootcamp: Rust and AI-Integrated Application Development | June 2026
- Computational Forensics and Digital Evidence Investigation, Universidade Cruzeiro do Sul | June 2026
- LEAD1x: Exercising Leadership: Foundational Principles, HarvardX / edX | May 2026
- Networking Basics, Cisco Networking Academy | July 2025
- Introduction to Cybersecurity, Cisco Networking Academy | July 2023
