Professional Summary

Full Stack Software Engineer focused on TypeScript, JavaScript, and Rust, building secure, scalable web applications end to end.

Experienced with React, Next.js, Node.js, Supabase, PostgreSQL, REST APIs, authentication, CI/CD, AWS fundamentals, and Linux server deployments.

Strong foundation in system design, cybersecurity, network fundamentals, digital forensics, secure data access, and AI-assisted development workflows.

Core Skills

Primary Languages: TypeScript, JavaScript, Rust, HTML, CSS

Additional Languages: Python, Bash, SQL fundamentals

Frontend: React, Next.js, React Native, Expo, Three.js, Vite, Tailwind CSS, Redux, responsive UI

Backend: Node.js, Next.js API routes, API development, API design, REST APIs, GraphQL, Supabase, authentication, authorization, webhooks

Rust and AI Development: Rust application development, Cargo, API-oriented Rust applications, AI-assisted software development workflows

Databases: PostgreSQL, SQL, database design, RPC calls, Row-Level Security (RLS)

Testing: Test-Driven Development (TDD); Vitest, automated validation, Biome, Lefthook

Infrastructure: AWS fundamentals, Docker, Linux, Nginx, Vercel, self-managed VPS, EasyPanel, GitHub Actions, CI/CD, EAS

Security, Networking, and Forensics: System design, software architecture, cybersecurity fundamentals, secure coding, secure data access, Role-Based Access Control (RBAC), Row-Level Security (RLS), network communication, TCP/IP, IPv4, IPv6, routers, wireless security, incident response, information security policy violations, digital evidence collection, computer forensic investigation, evidence management, chain of custody, scalable architecture

Design & Modeling: UML (Unified Modeling Language) - class, sequence, component diagrams

Full Stack Features: ERP systems, chatbots, JSON-driven flows, dashboards, CRUD systems, status tracking, payment webhooks, workflow automation

Developer Workflow: Git, GitHub, automated validation, production monitoring, deployment ownership, troubleshooting, technical documentation, continuous learning

Methodologies: Domain-driven design (DDD), Specification-driven design (SDD); Test-Driven Development (TDD); Agile

Professional Experience

Software Engineer | MG Laser

Franca, Brazil | November 2025 - Present

- Tech stack: TypeScript, React, Vite, Tailwind CSS, Node.js, Supabase, PostgreSQL, Linux VPS, EasyPanel.
- Build and maintain an ERP system covering inventory, sales, and daily operations, processing 200+ orders per day across multiple teams.
- Reduced manual data entry errors by approximately 95% by replacing spreadsheet-based workflows with structured forms and automated validation.
- Improved responsiveness on high-volume data tables through pagination and targeted RPC calls.
- Secured data access with Row-Level Security (RLS) and Role-Based Access Control (RBAC), restricting records to the appropriate user roles.
- Apply secure coding, audit-aware access control, and incident-response thinking when designing business-critical workflows.
- Manage deployment, monitoring, and server infrastructure on a self-managed Linux VPS.
- Restored the system after a critical production outage in under 10 minutes with no data loss.

Contractor - Software Engineer

Franca, Brazil

- Work for multiple clients on freelance and contract projects.
- Build full-stack web apps for clients using TypeScript, React, Next.js, Node.js, Supabase, PostgreSQL, Vite, Tailwind CSS, and Vercel.
- Built a live event registration system used by staff across multiple companies, including CPF and WhatsApp validation, responsive UI, and participant tracking workflows.
- Built and maintain a chatbot and admin dashboard for a tattoo and barber shop, turning chats into structured budget requests and follow-up tasks.
- Built landing pages and small business systems with payment integrations and webhooks to automate checkout and day-to-day work.
- Handle frontend, backend, database design, deployment, maintenance, live support, and ongoing improvements.
- Use AI-assisted development workflows to accelerate implementation while keeping code review, testing, and production validation under developer control.
- Use TDD with Vitest to avoid regressions and refactor safely.

Relevant Technical Project

Cybersecurity Project - RoadToCyberSec.com

<https://roadtocybersec.com>

- Curated and authored a structured, beginner-to-advanced cybersecurity learning path and resource hub focused on practical, actionable guidance.
- Designed sequential modules covering fundamentals, threat analysis, password security and MFA, safe browsing, device hygiene, incident response, network fundamentals, and digital evidence handling to build a security mindset.
- Documentation hosted on Mintlify with a searchable documentation index and clear learning path for beginners, developers, and non-technical professionals.

Certifications

- Santander Bootcamp: Rust and AI-Integrated Application Development | Santander Bootcamp | Issued June 2026
- Computational Forensics and Digital Evidence Investigation | Universidade Cruzeiro do Sul | 40 hours | Online course | Issued June 2, 2026
- LEAD1x: Exercising Leadership: Foundational Principles | HarvardX / edX | Issued May 2026
- Introduction to Cybersecurity | Cisco Networking Academy | Issued July 2023
- Networking Basics | Cisco Networking Academy | Issued July 2025

Education

B.Sc. Software Engineering

Universidade de Franca | 2025 - 2029

Languages

- Portuguese (Brazil): Native
- English: Advanced (C1)
- Spanish: Intermediate
